# State & Federal Energy Storage Technology Advancement Partnership (ESTAP)

## Todd Olinsky-Paul Clean Energy States Alliance

# **Thank You:**

## Dr. Imre Gyuk U.S. Department of Energy, Office of Electricity Delivery and Energy Reliability

## Dan Borneo Sandia National Laboratories

# **ESTAP** is a project of CESA

Clean Energy States Alliance (CESA) is a non-profit organization providing a forum for states to work together to implement effective clean energy policies & programs:

- Information Exchange
- Partnership Development
- Joint Projects (National RPS Collaborative, Interstate Turbine Advisory Council)
- Clean Energy Program Design & Evaluations
- Analysis and Reports

CESA is supported by a coalition of states and public utilities representing the leading U.S. public clean energy programs.

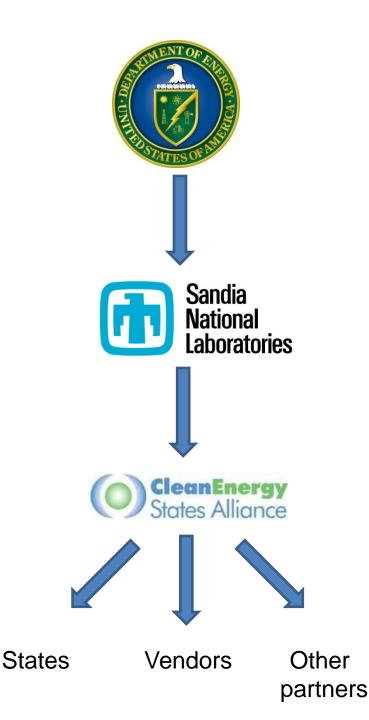

# **ESTAP\*** Overview

**Purpose:** Create new DOE-state energy storage partnerships and advance energy storage, with technical assistance from Sandia National Laboratories

**Focus:** Distributed electrical energy storage technologies

Outcome: Near-term and ongoing project deployments across the U.S. with co-funding from states, project partners, and DOE

\* (Energy Storage Technology Advancement Partnership)

# **ESTAP Key Activities**

- Disseminate information to stakeholders
  - ESTAP listserv >500 members
  - Webinars, conferences, information updates, surveys
- Facilitate public/private partnerships at state level to support energy storage demonstration project development
  - Match bench-tested energy storage technologies with state hosts for demonstration project deployment
  - DOE/Sandia provide \$ for generic engineering, monitoring and assessment
  - Cost share \$ from states, utilities, foundations, other stakeholders

# Flow Batteries for Grid Energy Storage:

### IMRE GYUK, PROGRAM MANAGER ENERGY STORAGE RESEARCH, DOE

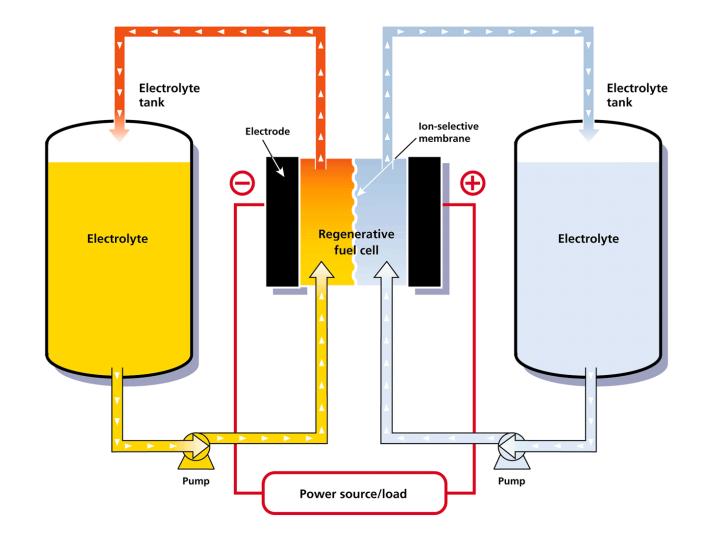

ESTAP 12-12-20

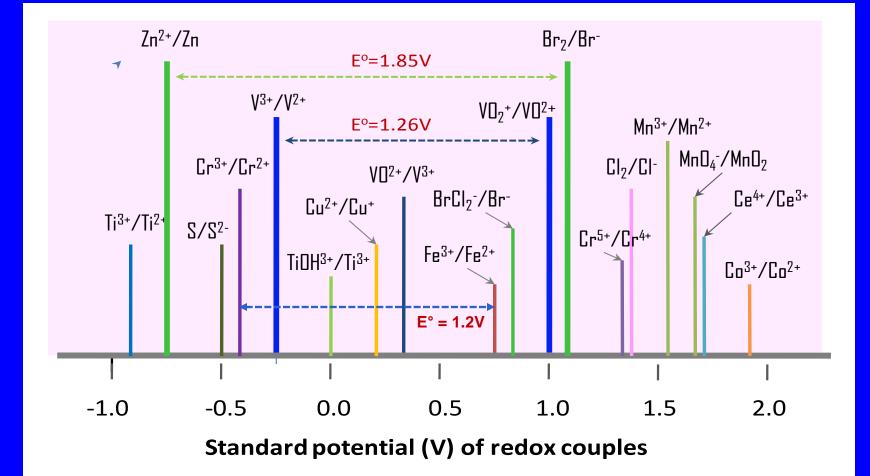

### It's easy to make a Battery: 2 Electrodes and an Electrolyte

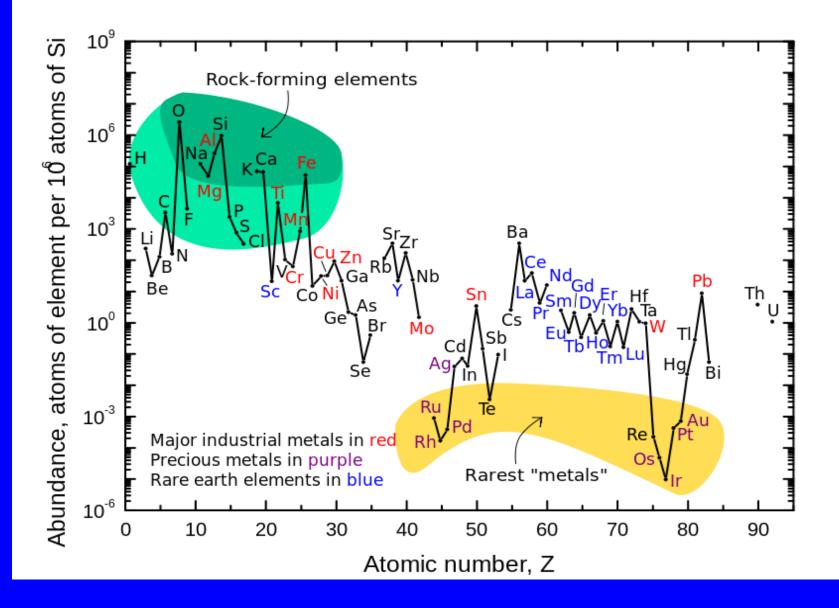

# A rechargeable Battery uses 2 Half-Cells with different Electrolytes separated by a Membrane.

Power depends on the Fuel Cell, Energy depends on the Electrolyte

### We want high Potential !

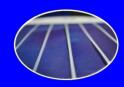

We want low Cost !

### Examples:

Zn Br – Primus Power (ARRA Project) Premium Power (ARRA Project) ZBB (Early Demos) Redflow (Testing at Sandia) V-V – Prudent Power Ashlawn (ARRAProject) UniEnergy (Based on PNNL Research) Fe Cr – Deeya Enervault (ARRA Project)

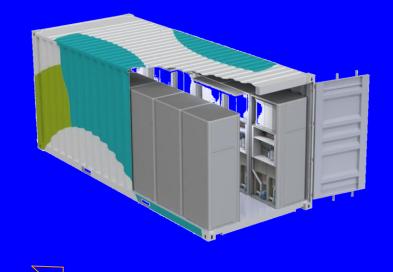

### **ARRA – Primus Power**

25 MW / 3hr battery plant to firm 50MW of wind for the Modesto Irrigation District in CA, providing equivalent flex capacity to 50 MW of natural gas engines costing \$73M

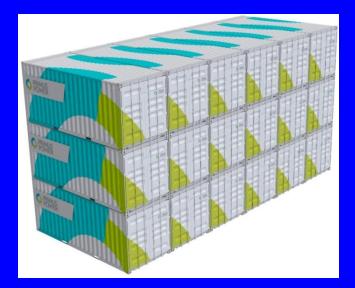

High power metal electrodes

2012-TiE50 Hottest Tech Startups 2011-GoingGreen Global 200

Fully self-contained, hermetically sealed flow battery modules

250kW/750kWh EnergyPods™

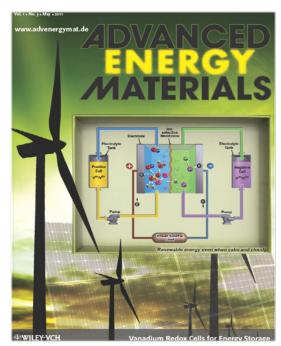

4MW/12MWh incremental "Plug & Play" deployment

Anderson *et. al.* Synthesis of Ionic Liquids Containing Cu, Mn, or Zn Coordination Cations

### Sandia, Nov. 2011

### **PNNL**, Nov. 2011

Liyu Li *et al.,* Stable Vanadium Redox Flow Battery with High Energy; 1, 394-400, 2011

## **Applications for Redox Flow Batteries**

**Bret Adams Dir. Business Development** 

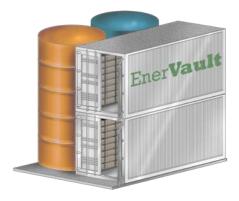

**December 20, 2012**

EnerVault Corporation 2012 All Rights Reserved

## Why Redox Flow Batteries for Grid Scale?

- Independent configuration of system power and energy
  - Application flexibility

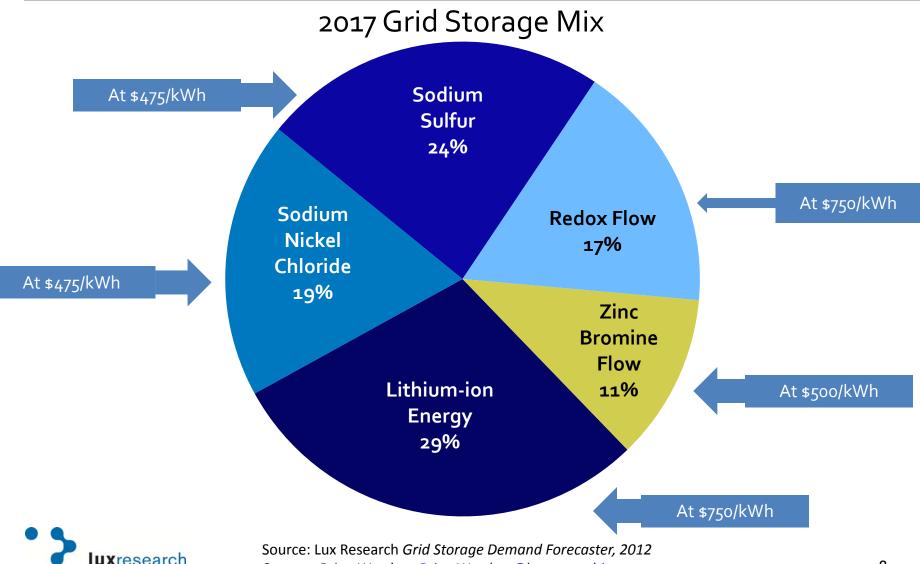

- Economics get better at higher energy to power ratio: 3 - 10 hrs
  - Peak shaving applications
  - Long duration back-up

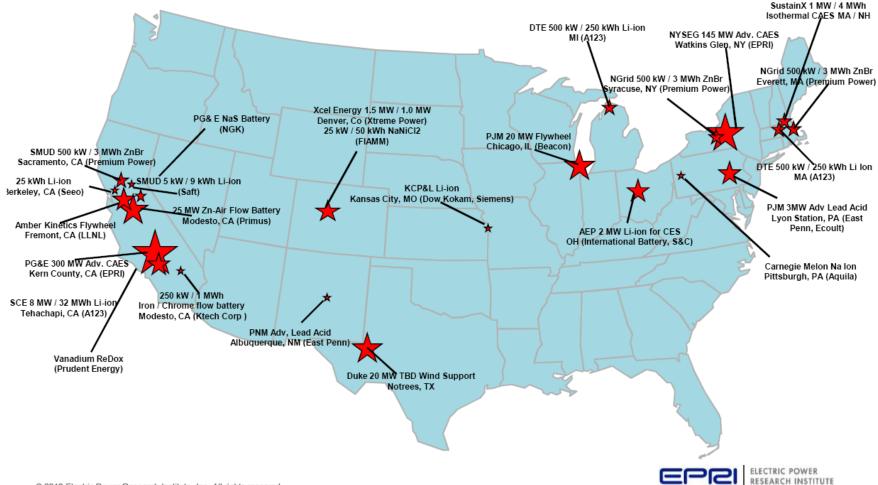

- System safety at high energy capacity
  - < 10 minutes of energy is electrically connected at any time

### RFB market share will grow to a 17% market share by 2017, with the highest growth rate

Contact: Brian Warshay, Brian.Warshay@luxresearchinc.com

### Energy Storage Demonstrations in the U.S. Planned or Under way – List is Not Complete

## **Utility Applications**

#### Energy Storage for the Electricity Grid: Benefits and Market Potential Assessment Guide

A Study for the DOE Energy Storage Systems Program

Jim Eyer

Garth Corey

#### 

Electricity Energy Storage Technology Options A White Paper Primer on Applications, Costs and Benefits

#### Moving Energy Storage from Concept to Reality:

Southern California Edison's Approach to Evaluating Energy Storage

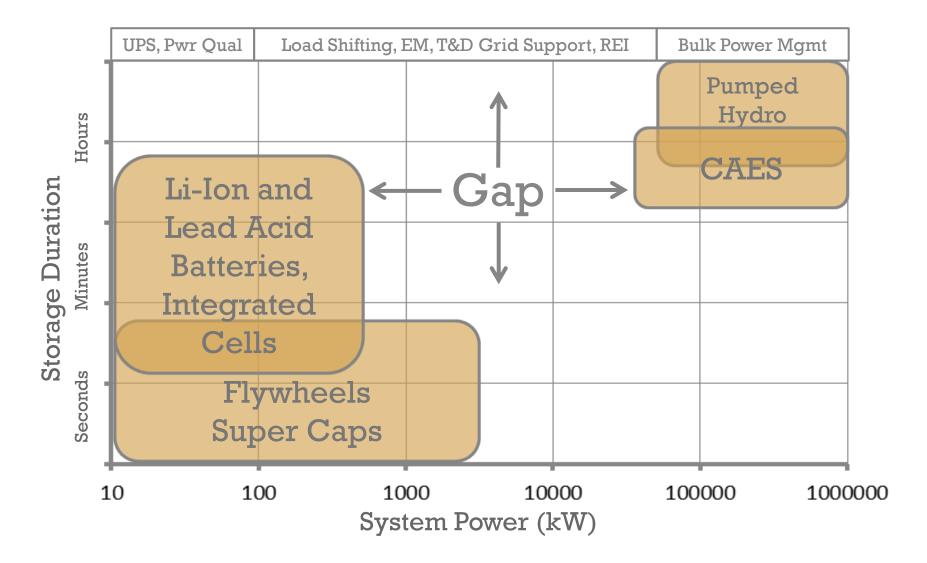

#### Abstract:

The electric industry has pursued cost-effective energy storage for many decades. In a business tradinoially constrained by the need to instantaneously match demand with supply, the potential to store generated electricity for use during more valuable periods has been long recognized. In recent years a series of factors, including technological progress, legislative and regulatory talividia, and use with defaulting associated with integriting variable renewable generation, have propelled energy storage to the forefrout of industry concisiouses. This excitement, however, does not by useff resolve the various complexities facing energy usorage Even the definition of "storage" can be confusing, as the term refers to multiple different technologies: and potential uses across the electrical grid. Additionally, while these options continue to develop and emerge, there is little consensus on how their worth should be evaluated. Recognizing these challenges, this white paper offers a methodology for contextualizing and analyzing the broad and heterogeneous space of energy storage, and it ultimately identifies applications currently visewed as having the greatest potential value from Southern Chiffornia Edison is (SCE) perspective. It is SCE is goint to advance the storage discussions for a more reliable grid, with reduced environmental impacts, at overall lower costs to electric commers.

### Grid Connected Flow Battery Installation Examples : Emerging Market Wireless Telecom Towers

- Emerging market telecom sites often have poor, intermittent grid electricity supplemented by diesel generators and lead acid batteries
- Deeya Energy's ESP flow batteries are operating in multiple emerging market countries to improve the cost and reliability of customers' electricity
- ~2/3 of today's installs are grid connected
- Proven value proposition in dozens of wireless telecom customer installations:
  - Up to 70% energy savings
  - < 2.5 years payback</p>
  - Reduction or elimination of diesel generator use
