**SURDNA FOUNDATION**

*Fostering sustainable communities in the United States*

# Resilient Power Project

- Increase public/private investment in clean, resilient power systems
- Engage city officials to develop resilient power policies/programs
- Protect low-income and vulnerable communities
- Focus on affordable housing and critical public facilities
- Advocate for state and federal supportive policies and programs
- Technical assistance for pre-development costs to help agencies/project developers get deals done
- See [www.resilient-power.org](http://www.resilient-power.org) for reports, newsletters, webinar recordings

### RESILIENT POWER PROJECT

To reduce impacts and dangers of power outages in communities now and in the future, the Resilient Power Project works to provide technology and policy solutions to address three challenges: Community Resiliency, Climate Adaptation, and Climate Mitigation.

The Resilient Power Project, a joint initiative of Clean Energy Group and Meridian Institute, is focused on accelerating market development of **resilient, clean energy solutions** for affordable housing and critical community facilities in low-income and disadvantaged communities. The Project is targeted to the deployment of solar PV combined with energy storage (solar+storage) – to power essential services during extended power outages and to reduce the economic burden of energy costs in vulnerable communities. The goal is to further clean energy equity by ensuring that all communities have access to the economic, health, and resiliency benefits that solar and energy storage technologies can provide.

Clean Energy Group's role in this process is to inform, coordinate, and assist in the planning and implementation of **resilient power projects** in underserved communities, in both rural and urban areas, across the country. In addition to providing program guidance to policy makers and technical assistance to developers and community organizations, we also prepare **reports and analysis** on resilient power programs and projects, clean

# About Geli

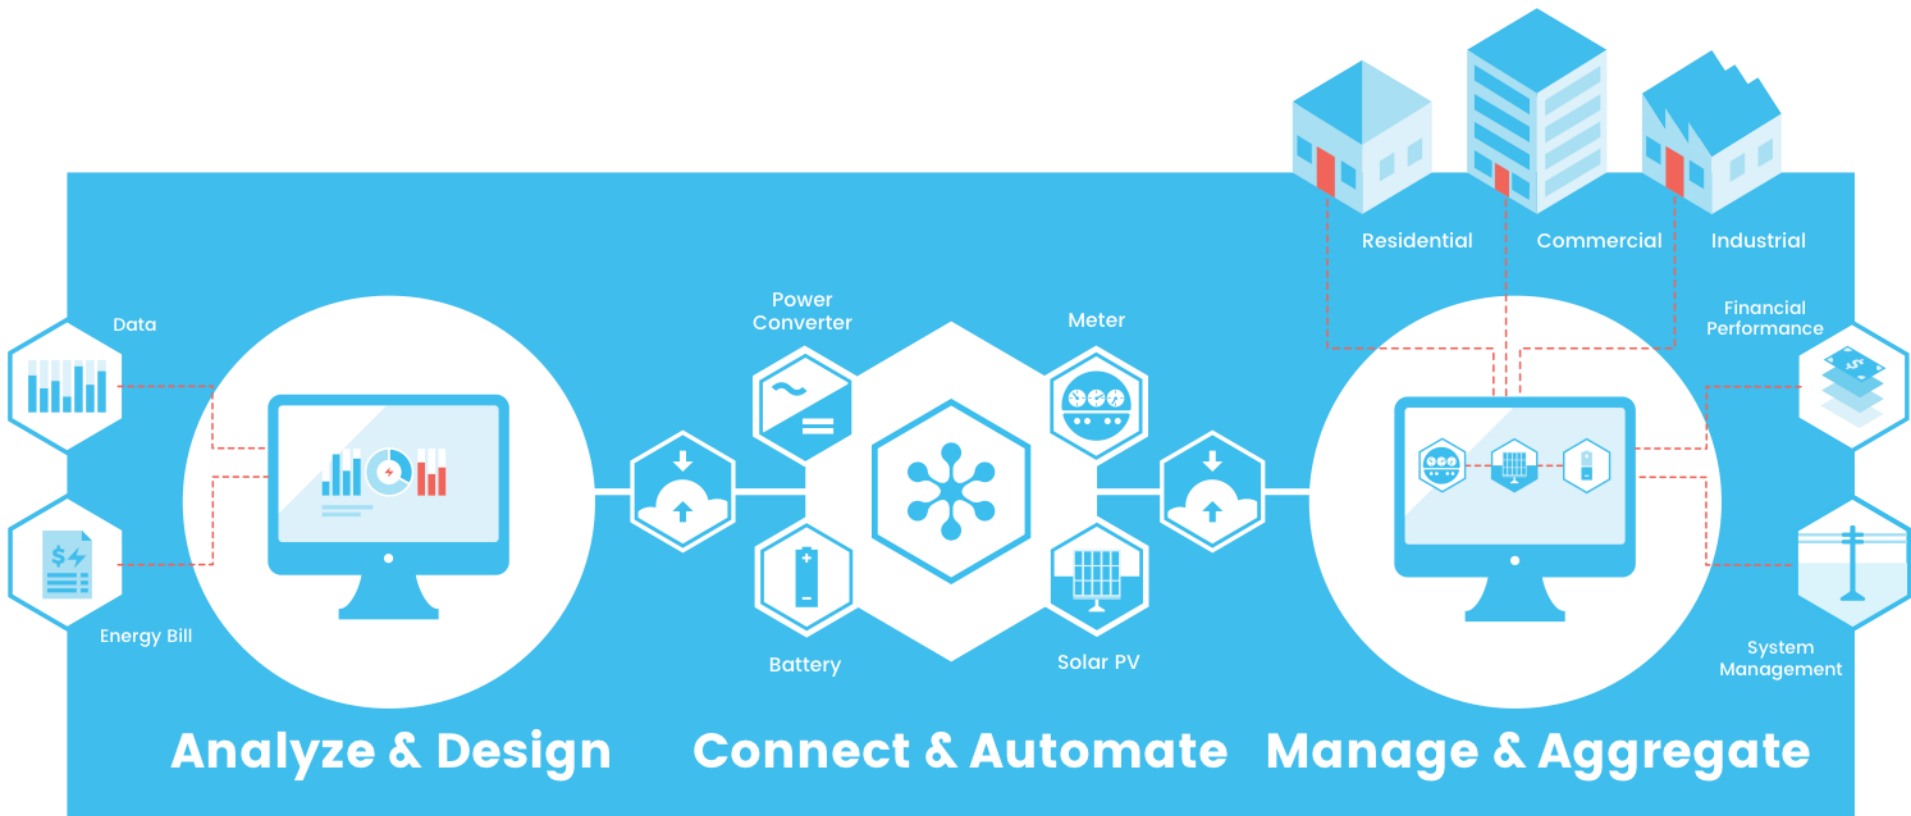

Software that maximizes the value of energy storage

Geli's solutions enable many types of service providers – from developers to utilities – to deliver intelligent energy storage systems.

Our products speed time-to-market and reduce costs for all industry participants.

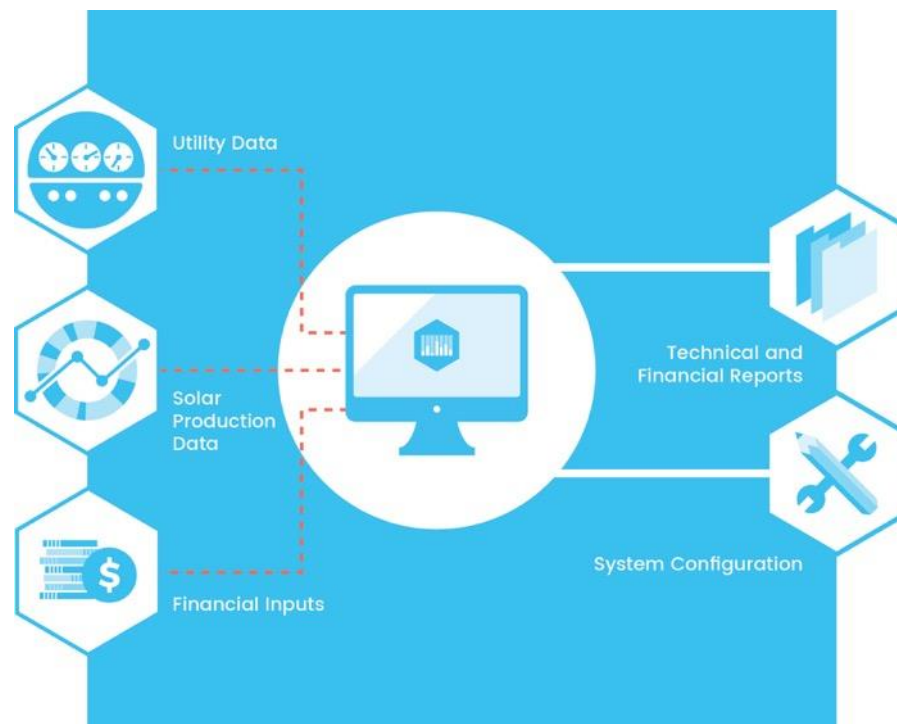

# Geli Platform

# Analyze & Design: Geli ESyst

Geli Esyst is a free web-based design tool to aid project developers in right-sizing and selecting energy storage and solar-plus-storage systems for commercial and industrial facilities.

Create your free account at [esyst.geli.net](https://esyst.geli.net)

# Energy & Demand

## Energy (kWh)

Energy is a measure of the amount of power (kW) consumed over a specific period of time (in this case, hours)

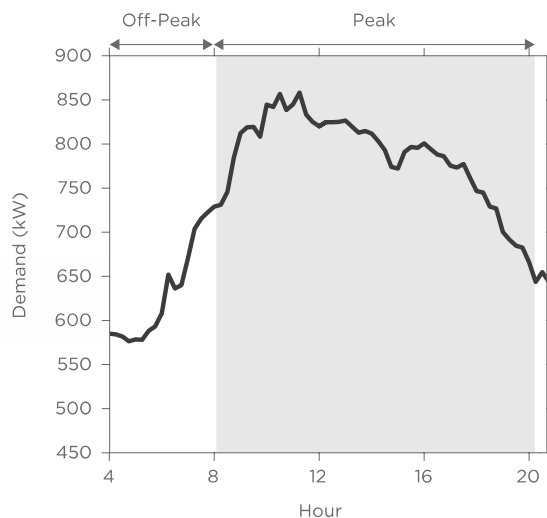

## Demand (kW)

Demand corresponds to instantaneous power (kW) consumed and is typically measured as the average of a 15 minute period

# Solar + Storage: Why 1 + 1 = 3

# Battery Health

With every project simulation Geli Esyst generates a battery health model. Combining anticipated lifetime battery cycles, charge and discharge rates, and OEM-supplied degradation curves enables Geli to predict what the economic impact will be as the effective capacity of the battery decreases over time.

Battery warranties vary by vendor and can be tied to years, number of cycles, or both.
