

# 2013-2022 Resilient Power Project Impacts

In 2013—after Superstorm Sandy left more than eight million customers without power throughout the Northeast—Clean Energy Group started the Resilient Power Project (RPP) to pursue equitable and innovative strategies to advance resilient power technologies—solar paired with battery storage—in underserved communities. The RPP focuses on resilient power solutions that bring improved health, safety, and economic benefits to the most at-risk populations, such as medically vulnerable households, environmental justice communities, and communities of color. Our top priority is supporting community-based organizations, affordable housing providers, and local government partners in their efforts to bring resilient power resources to their communities. This work includes awareness building, one-on-one technical expertise, capacity building opportunities, and technical assistance funding. The RPP is committed to awarding at least 50 percent of technical assistance funding to BIPOC-led organizations.

## 255 Community Facilities

The **Resilient Power Project** has advanced the exploration of resilient solar+storage for **255** community facilities in low-income and underserved communities across **28** states and U.S. territories.

## 28 States and Territories

## \$1.3 million in Grant Awards

**Clean Energy Group** has awarded **130** technical assistance and capacity building grants totaling **\$1.3 million** to over **100** community-based organizations, municipalities, first responders, affordable housing, and community service providers working to advance resilient solar+storage in their communities.

## Over 100 Community Service Partners

## 44 Completed Projects

These collaborations have resulted in **44** completed projects, including fire stations, health clinics, institutions of faith, resilience hubs, municipal facilities, and over **3,000** units of affordable housing.

## 3,000 Affordable Housing Units
