

State-Federal RPS Collaborative Webinar

Using AVERT to Estimate the Emissions Benefits of Clean Energy Policies and Programs

Hosted by
Warren Leon, Executive Director, CESA

Monday, June 1, 2015

Housekeeping

All participants are in “Listen-Only” mode. Select “Use Mic & Speakers” to avoid toll charges and use your computer’s VOIP capabilities. Or select “Use Telephone” and enter your PIN onto your phone key pad.

Submit your questions at any time by typing in the Question Box and hitting Send.

This webinar is being recorded.

You will find a recording of this webinar, as well as all previous CESA webcasts, archived on the CESA website at

www.cesa.org/webinars

Clean Energy States Alliance (CESA) is a national nonprofit coalition of public agencies and organizations working together to advance clean energy.

State-Federal RPS Collaborative

- With funding from the Energy Foundation and the US Department of Energy, CESA facilitates the **Collaborative**.
- Includes **state RPS administrators, federal agency representatives**, and other stakeholders.
- Advances dialogue and learning about RPS programs by **examining the challenges and potential solutions** for successful implementation of state RPS programs, including **identification of best practices**.
- To sign up for the Collaborative listserve to get the **monthly newsletter** and announcements of **upcoming events**, see: www.cesa.org/projects/state-federal-rps-collaborative

Today's Guest Speakers

Robyn DeYoung, State Climate and Energy Program
Manager, U.S. Environmental Protection Agency (EPA)

Jeremy Fisher, Principal Associate, Synapse Energy
Economics

Synapse
Energy Economics, Inc.

Overview of EPA's AVOIDed Emissions and geneRation Tool (AVERT)

Robyn DeYoung, US EPA

Jeremy Fisher PhD, Synapse Energy Economics

June 1, 2015

Today's Presenters

Robyn DeYoung

US EPA State and Local Climate and Energy Program

Co-Author of Roadmap for Incorporating EE/RE Policies in SIPs

Previously at Ohio EPA

Jeremy Fisher

Principal Associate, Synapse Energy Economics

Work for public interest clients, including state and federal agencies, consumer advocates, and environmental groups

Long-term planning, market systems, energy & env. policies

Introduction on Building Energy Efficiency and Renewable Energy (EE/RE) Resources

In 2009, EPA:

- Began to renew our effort to encourage and remove barriers to EE/RE and CHP
- Looked for ways to make it easier to include emission benefits of EE/RE and CHP to meet clean air goals
 - States were asking for clearer guidance
- Wanted to be clear that these are viable, cost effective emission reduction strategies
 - Focused our efforts on air quality plans (e.g., State Implementation Plans (SIPs) for National Ambient Air Quality Standards (NAAQS))

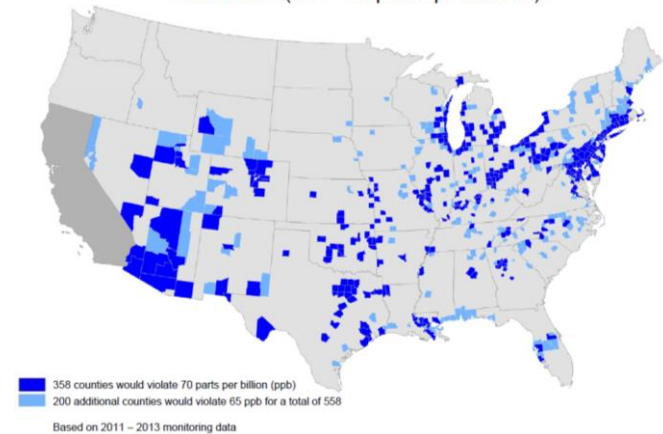

Opportunity to Capture the Air Quality and Emission Benefits of EE/RE Programs

- State air quality planners are looking for new ways to reduce emissions, improve air quality
- Meanwhile, PUC and SEOs are advancing proven energy efficiency and renewable energy (EE/RE) policies and programs
- Opportunity for states to include the emissions benefits in air quality plans
- In 2012, EPA released the EE/RE SIP Roadmap... But still needed to remove a key barrier – emission quantification of energy impacts

Counties Where Measured Ozone is Above Proposed Range of Standards (65 – 70 parts per billion)

AVERT Overview

- AVERT addresses key challenges associated with quantifying emission benefits of EE/RE programs.
 - Integrated nature of the power system makes it difficult to quantify generation and emissions changes from EE and RE (wind and solar)
 - Generating units, and thus emissions (CO₂ and criteria air pollutants), respond differently to different programs (EE/RE);
- AVERT translates the energy savings and renewable generation of state EE/RE programs into emission reductions for NAAQS compliance
 - An Excel-based tool that allows users to understand the effect of EE and RE on emission changes at the regional, state, county and EGU levels
 - Built to be straightforward, transparent and credible
 - Peer reviewed and benchmarked against industry standard electric power sector model – PROSYM

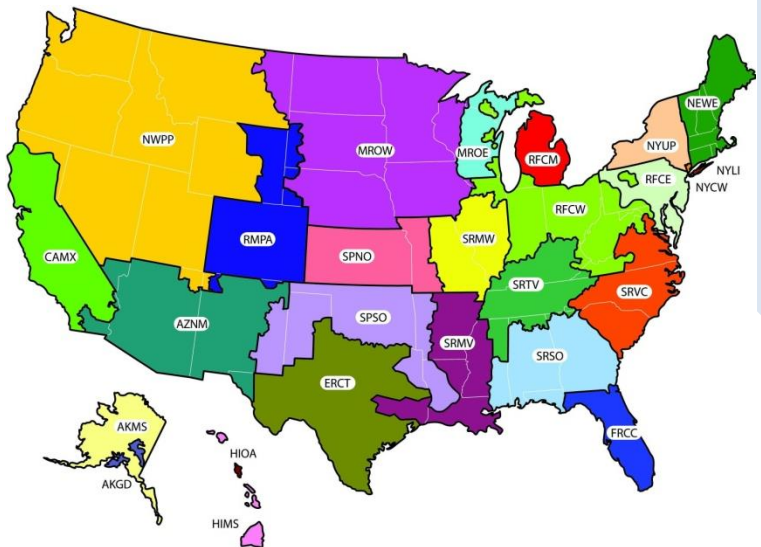

Emission Quantification Methods Basic to Sophisticated

Basic Method

eGRID region non-baseload
emission rates

Intermediate Method

filling the gap

Sophisticated Method

Energy Modeling

Applications for AVERT-Calculated Emissions

- SIP credit in a state's National Ambient Air Quality Standard Clean Air Act Plan*
- Analyze NO_x, SO₂ and CO₂ emission impacts of an EE/RE program portfolio
- Compare emission impacts between different EE/RE resources
- Identify location of emission reductions at the regional, state, and county levels
 - EGU representation also available
- Promote emission benefits of EE/RE with easy-to-interpret maps and charts
- This is not a projection tool, not intended for analysis more than 5 yrs from baseline

* With the concurrence of the appropriate EPA regional office

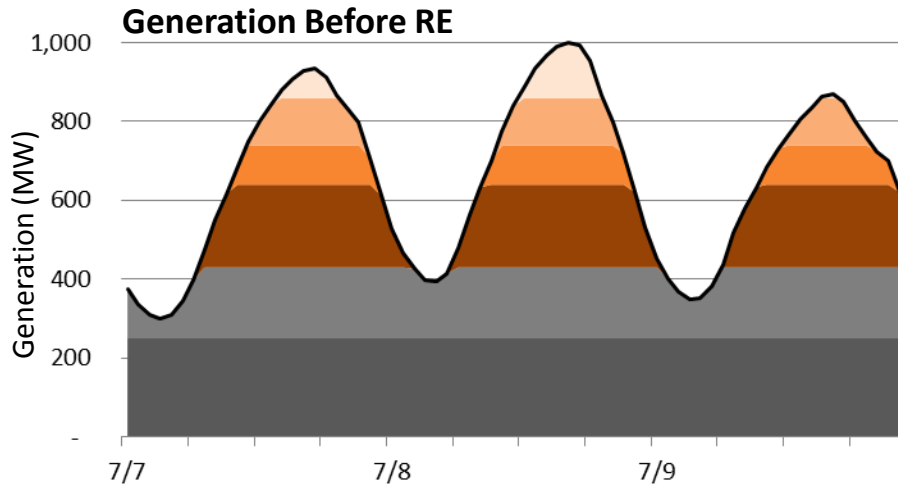

Examples Using AVERT

- The Clean Air Benefits of Wind Energy
 - AWEA, May 2014
- Maine Distributed Solar Valuation Study
 - Maine PUC March 2015
- Scoring Green Bonds using AVERT
 - The Alliance to Save Energy’s CarbonCount™ May 2015
- U.S. EPA’s Regional Comparison of Wind, Solar and EE programs
 - US EPA and Synapse Energy Economics, April 2015
- U.S. EPA’s Ozone Advance Program
 - Various states & local governments, ongoing
- DOE’s Online Smart Grid Calculator
 - PNL, Fall 2015

AVERT Overview

- Using data-driven analysis, how do we distinguish which EGU respond to changes in load reduction?
 - Rich dataset from EPA Clean Air Markets division (hourly, unit-by-unit generation & emissions)
 - Gather statistics on unit operations under specific load conditions, and then replicate changes through a Monte Carlo analysis
- Model divided between statistical core module, and user interface

Loading Order Example

- AVERT is an **operational** simulation model.
- Conceptually, generation is dispatched in a **loading order**, least expensive generators first
- EE/RE (generally) reduces requirement for fossil generation
- Reduced generation = reduced emissions

AVERT Underlying Data

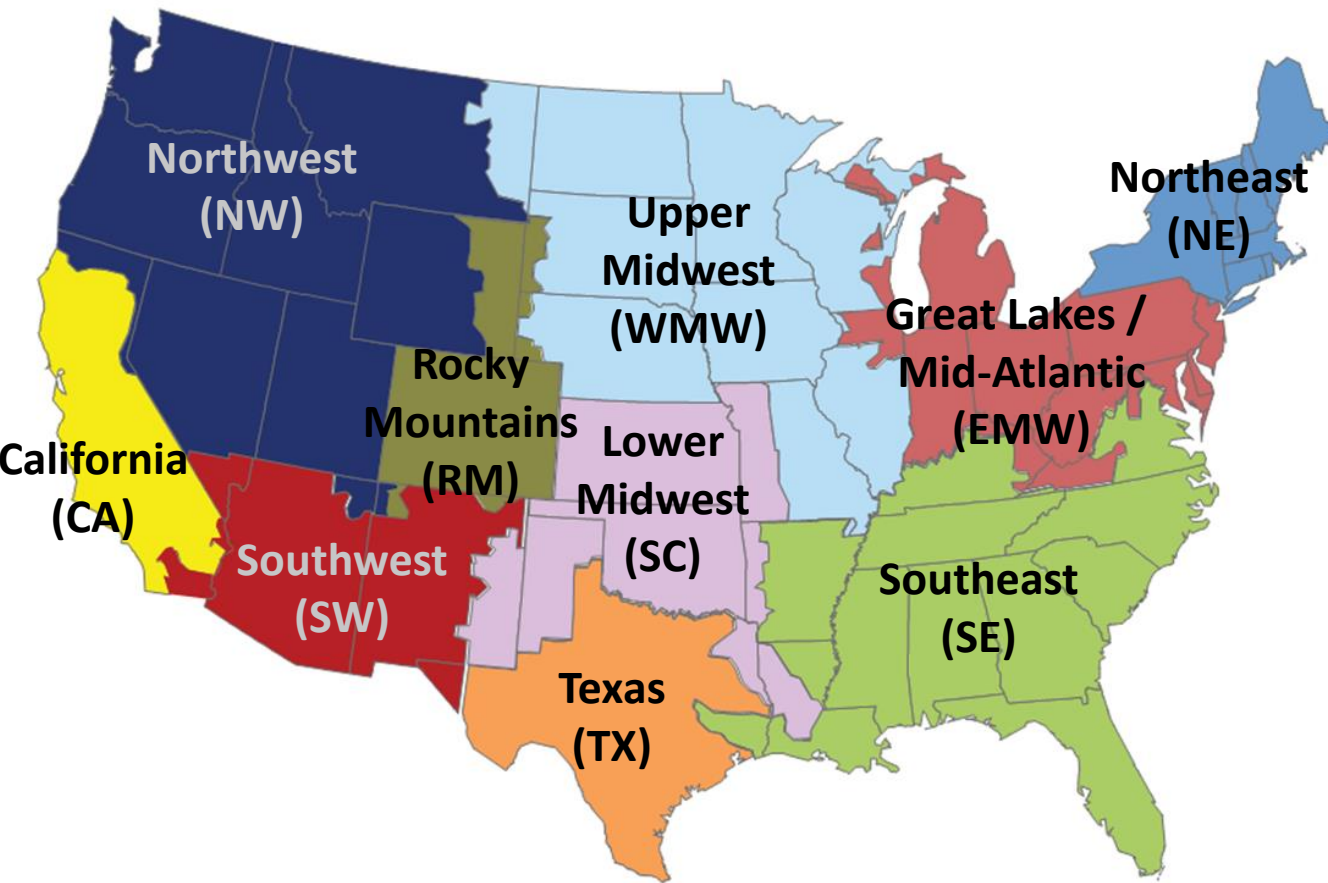

Continuous Emissions Monitoring (CEMS) data from Clean Air Markets Division (CAMD) @ EPA

Hourly generation and emissions of CO₂, SO₂, and NO_x.

Fossil generators > 25 MW

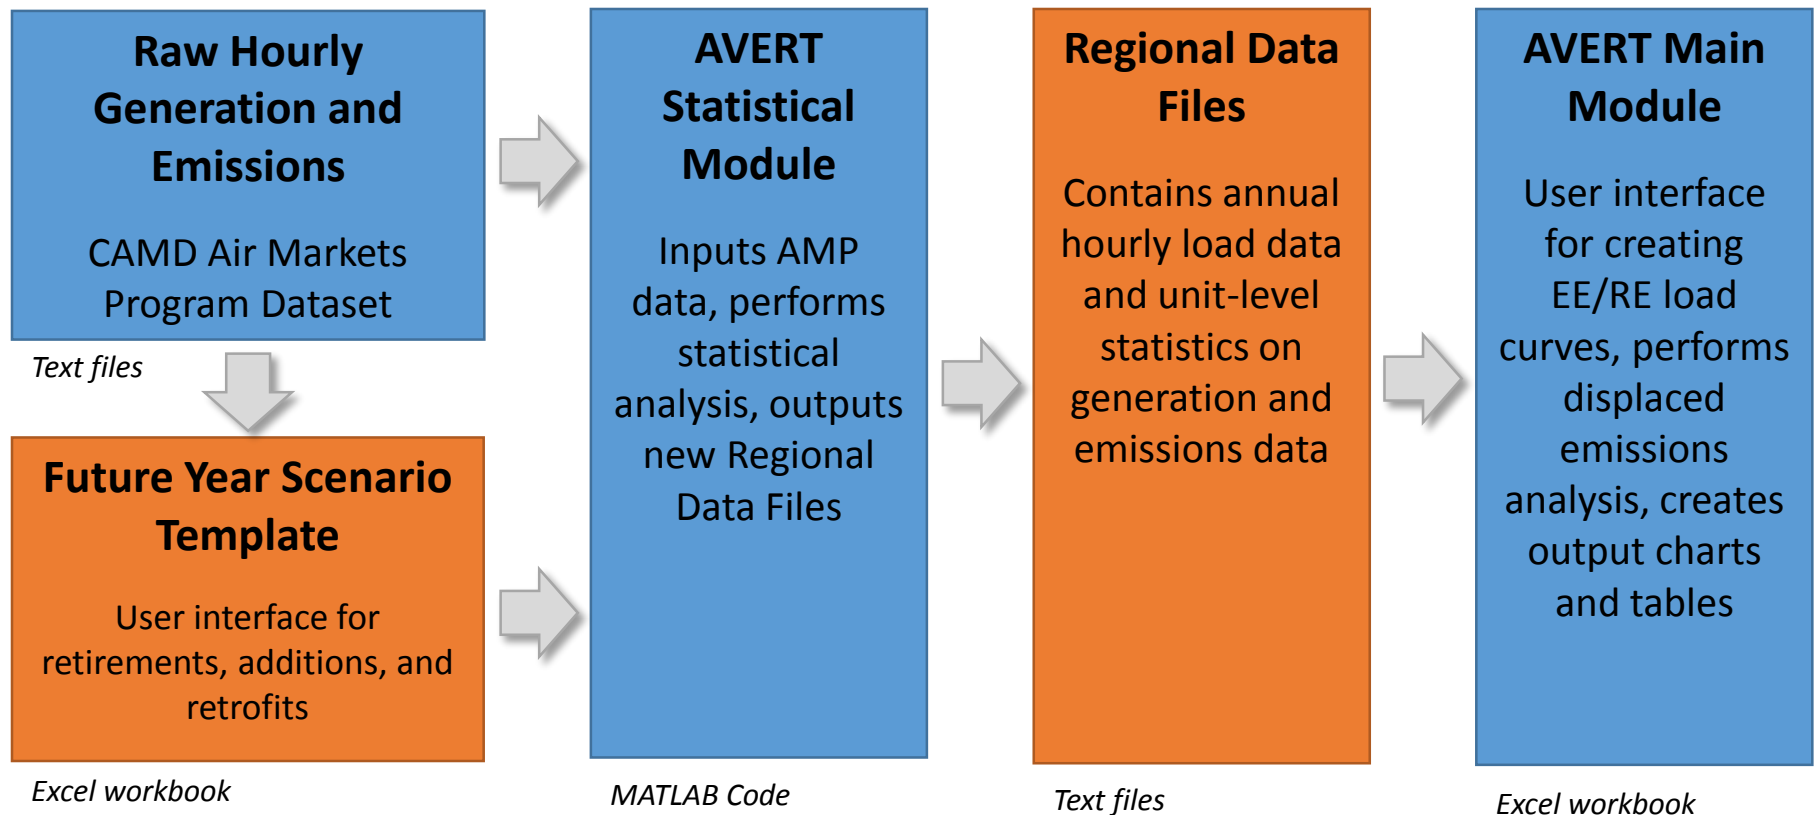

AVERT Regions

Regions represent relatively autonomous electricity production zones, and are based on EIA's electricity market module regions.

Regions include: California, Great Lakes / Mid-Atlantic, Lower Midwest, Northeast, Northwest, Rocky Mountains, Southeast, Southwest, Texas, and Upper Midwest

AVERT's Modules and Data Files

Most users will only need to use the Regional Data Files and AVERT Main Module to calculate emissions

New U.S. EPA Paper on Assessing Emission Benefits of EE/RE Resources

- We studied the role of four different EE/RE resources in AVERT's 10 regions across the U.S.
 - Which resources are most effective at avoiding NO_x and CO₂ emission impacts and are which regions more responsive?

13

Figure 1. Electricity generation resource base in US regions.

13

New U.S. EPA Paper on Assessing Emission Benefits of EE/RE Resources – Results

- We found that there is variation in emission impacts across the AVERT regions.
 - Results from 3% penetration of EE Portfolio for CO₂ and NO_x are shown below.

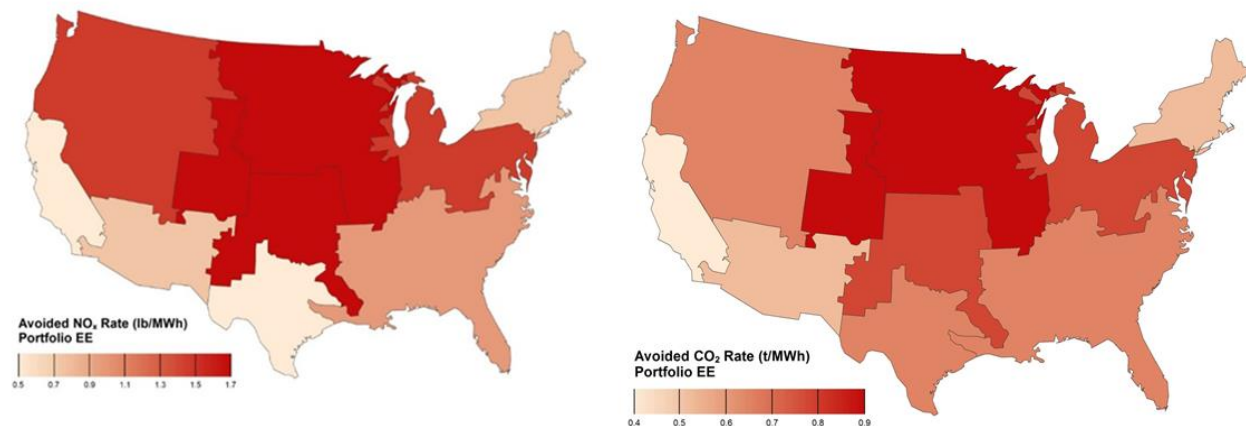

Figure 1. Regional distribution of avoided NO_x (left side) and CO₂ (right side) (tons per MWh) from a 3% avoided generation portfolio energy efficiency resource.

New U.S. EPA Paper on Assessing Emission Benefits of EE/RE Resources - Results

Avoided CO2 Rate (t/MWh)				
	Wind	Utility PV	Portfolio EE	Baseload EE
Northeast	0.52	0.53	0.54	0.53
Great Lakes / Mid-Atlantic	0.78	0.77	0.77	0.77
Southeast	0.66	0.67	0.67	0.67
Lower Midwest	0.82	0.78	0.79	0.81
Upper Midwest	0.91	0.89	0.89	0.90
Rocky Mountains	0.85	0.83	0.83	0.84
Texas	0.67	0.64	0.64	0.66
Southwest	0.57	0.56	0.56	0.56
Northwest	0.68	0.68	0.66	0.68
California	0.49	0.49	0.49	0.49

Avoided NOx Rate (lbs/MWh)				
	Wind	Utility PV	Portfolio EE	Baseload EE
Northeast	0.62	0.68	0.72	0.65
Great Lakes / Mid-Atlantic	1.27	1.30	1.31	1.29
Southeast	0.97	1.02	1.02	1.00
Lower Midwest	1.59	1.62	1.61	1.60
Upper Midwest	1.55	1.54	1.54	1.54
Rocky Mountains	1.63	1.56	1.57	1.59
Texas	0.66	0.68	0.68	0.67
Southwest	0.91	0.85	0.79	0.84
Northwest	1.32	1.35	1.38	1.37
California	0.73	0.70	0.67	0.70

Across EE and RE options

- **Wind and Baseload EE** create the highest level of displaced CO₂ emissions per MWh avoided
- There is **more variation** in the effect of programs on displaced NO_x emissions per MWh avoided

Across US Regions

- Regions with a disproportionately **high coal resource base** (i.e., Midwest, Great-Lakes, and Rockies) experience the greatest emission displacements

DEMONSTRATION

AVERT Resources

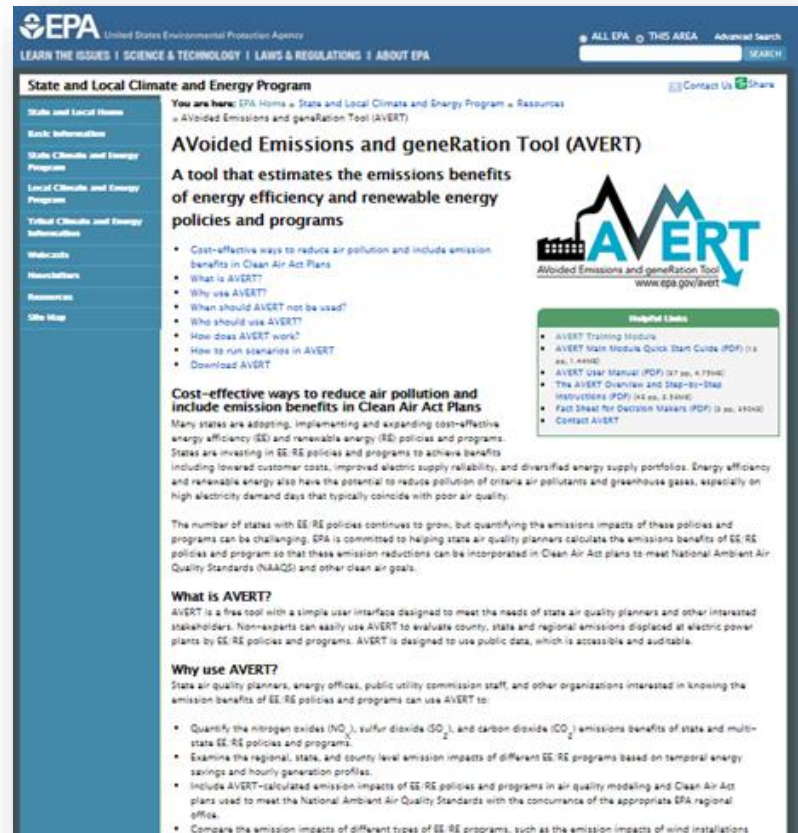

- For more information on AVERT visit:
www.epa.gov/avert

- AVERT Online training:
<http://epa.gov/avert/training-module/directory.html>

- Contact us at
AVERT@epa.gov

The screenshot shows the EPA website's page for the AVERT tool. The header includes the EPA logo and navigation links. The main content area features the title "AVOIDED EMISSIONS and generation Tool (AVERT)" and a sub-header "A tool that estimates the emissions benefits of energy efficiency and renewable energy policies and programs". Below this is a list of bullet points: "Cost-effective ways to reduce air pollution and include emission benefits in Clean Air Act Plans", "What is AVERT?", "Why use AVERT?", "When should AVERT not be used?", "Who should use AVERT?", "How does AVERT work?", and "How to run scenarios in AVERT". A section titled "Cost-effective ways to reduce air pollution and include emission benefits in Clean Air Act Plans" follows, with a paragraph explaining that many states are adopting EE and RE policies. Another section, "What is AVERT?", describes the tool's user interface. A "Why use AVERT?" section lists benefits for stakeholders. A sidebar on the left contains navigation links for "State and Local Climate and Energy Program", "State Climate and Energy Program", "Local Climate and Energy Program", and "Global Climate and Energy Information". A "Helpful Links" box on the right lists resources like "AVERT Training Module", "AVERT State Module Quick Start Guide", "AVERT User Manual", "The AVERT Overview and Step-by-Step Instructions", and "Fact Sheet for Decision Makers".

Additional Slides

Statistical Module

Operating Statistics (1)

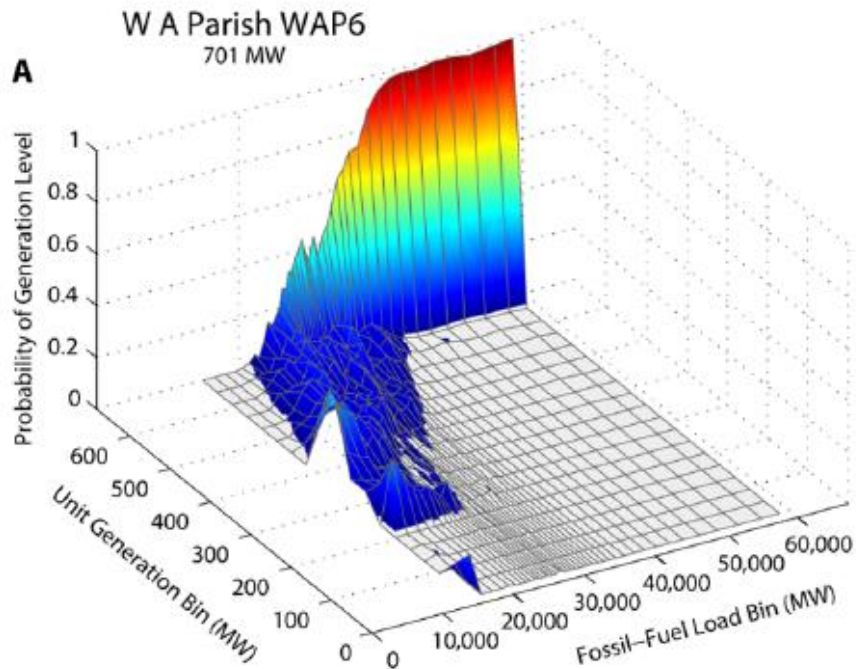

How often, and under what conditions, does an EGU generate power?

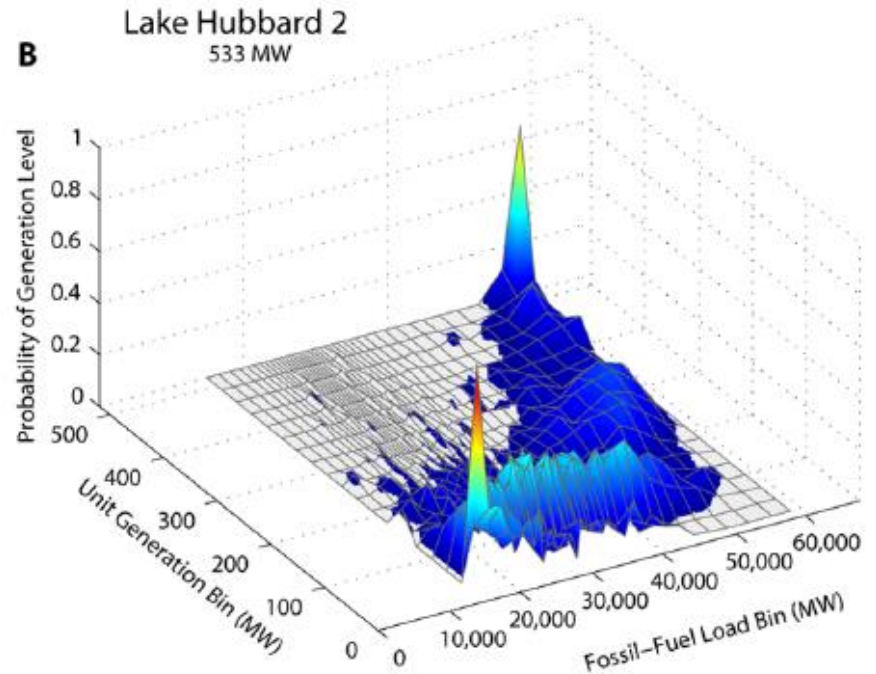

Statistical Module

Operating Statistics (2)

When an EGU is on, how much does it produce under various load conditions?

Baseload coal

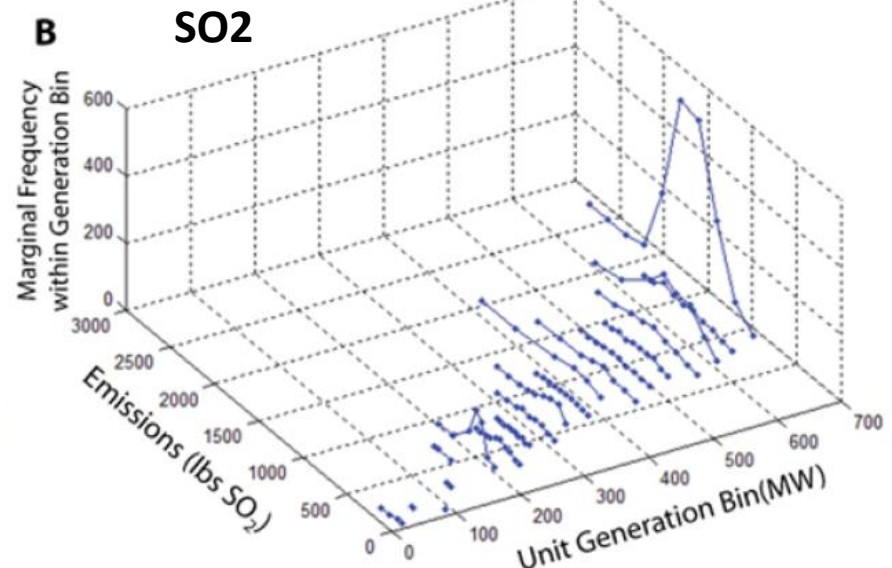

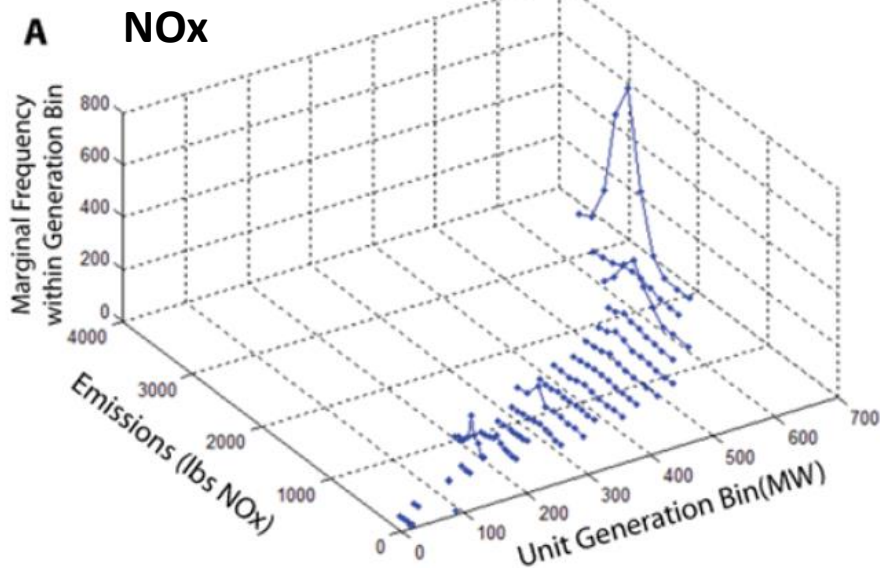

Intermediate gas

Statistical Module

Operating Statistics (3)

How much emissions are released by an EGU at different levels of generation?

Oklahoma Power Station 1
698 MW

Statistical Module Monte Carlo

a) Estimate average EGU generation and emissions through Monte Carlo simulation.

b) Estimate change in EGU output per change in system demand

ERCOT Generation Curve 2012
